Vortrag im Rahmen des Institutskolloquiums

24. April 2013, 16:00 Uhr

Seminarraum, Ludwigstraße 33 I

I will review the basics of effectiveness evaluation in education, focusing on the value added approach. In this framework, multilevel models play a key role. I will consider some issues in multilevel modelling that are central in educational applications, such as contextual effects, endogeneity and the choice between random and fixed effects. The topics will be illustrated through the case of school ‘league tables’ in England.
